# *SC205 ISC2 CSSLP Vorbereitung*

**Kurzbeschreibung:**

Der Kurs **SC205 ISC2 CSSLP Vorbereitung** ist ideal für Softwareentwickler und Sicherheitsexperten, die für die Anwendung von Best Practices in jeder Phase des SDLC verantwortlich sind - vom Softwaredesign und der Implementierung bis hin zum Testen und Bereitstellen.
Gleichzeitig werden sie auf die Prüfung zur ISC2 Zertifizierung des CSSLP vorbereitet.
Das breite Themenspektrum des Common Body of Knowledge (CBK®) des CSSLP gewährleistet die Bedeutung des Kurses für alle Disziplinen der Informationssicherheit.

**Zielgruppe:**

Der Kurs **SC205 ISC2 CSSLP Vorbereitung** richtet sich an:

- Software Architect
- Software Engineer
- Software Developer
- Application Security Specialist
- Software Program Manager
- Quality Assurance Tester
- Penetration Tester
- Software Procurement Analyst
- Project Manager
- Security Manager
- IT Director/Manager

**Voraussetzungen:**

Um dem Lerntempo und Inhalten des Kurses **SC205 ISC2 CSSLP Vorbereitung** gut folgen zu können und um sich für die Zertifizierung zu qualifizieren, müssen Sie mindestens folgende Voraussetzungen zu erfüllen:

- Mindestens vier Jahre Berufserfahrung im Bereich SDLC
- Erfahrung in einem oder mehreren der acht Domänen des ISC2-CSSLP-Leitfadens oder drei Jahre Berufserfahrung in einem oder mehreren der acht Domänen des CSSLP-Leitfadens
- Abschluss in Informatik, Informationstechnologie (IT) oder verwandten Bereichen

**Sonstiges:**

**Dauer:** 5 Tage

**Preis:** 3450 Euro plus Mwst.

**Ziele:**

Ziel des Kurses **SC205 ISC2 CSSLP Vorbereitung** ist es, Ihnen ein fundiertes Wissen über sicherheitskritische Aspekte im gesamten Softwareentwicklungs-Lebenszyklus zu vermitteln. Sie lernen, wie Sie Sicherheit von Anfang an in den Softwareentwicklungsprozess einbinden und so die Entwicklung sicherer Anwendungen sicherstellen können.

**Inhalte/Agenda:**

- **Domain 1: Secure Software Concepts**
  - 1.1 Understand core concepts
  - 1.2 Understand security design principles
- 
- **Domain 2: Secure Software Lifecycle Management**
  - 2.1 Manage security within a software development methodology (e.g., Agile, waterfall)
  - 2.2 Identify and adopt security standards (e.g., implementing security frameworks, promoting security awareness)
  - 2.3 Outline strategy and roadmap
  - 2.4 Define and develop security documentation
  - 2.5 Define security metrics (e.g., criticality level, average remediation time, complexity, Key Performance Indicators (KPI), objectives and key results
  - 2.6 Decommission applications
  - 2.7 Create security reporting mechanisms (e.g., reports, dashboards, feedback loops)
  - 2.8 Incorporate integrated risk management methods
  - 2.9 Implement secure operation practices
- 
- **Domain 3: Secure Software Requirements**
  - 3.1 Define software security requirements
  - 3.2 Identify compliance requirements
  - 3.3 Identify data classification requirements
  - 3.4 Identify privacy requirements
  - 3.5 Define data access provisioning
  - 3.6 Develop misuse and abuse cases
  - 3.7 Develop security requirement traceability matrix
  - 3.8 Define third-party vendor security requirements
- 
- **Domain 4: Secure Software Architecture and Design**
  - 4.1 Define the security architecture
  - 4.2 Perform secure interface design
  - 4.3 Evaluate and select reusable technologies
  - 4.4 Perform threat modeling
  - 4.5 Perform architectural risk assessment and design reviews
  - 4.6 Model (non-functional) security properties and constraints
  - 4.7 Define secure operational architecture (e.g., deployment topology, operational interfaces, Continuous Integration and Continuou Delivery (CI/CD))
- 
- **Domain 5: Secure Software Implementation**
  - 5.1 Adhere to relevant secure coding practices (e.g., standards, guidelines, regulations)
  - 5.2 Analyze code for security risks
  - 5.3 Implement security controls (e.g., watchdogs, file integrity monitoring, anti-malware)
  - 5.4 Address the identified security risks (e.g., risk strategy)
  - 5.5 Evaluate and integrate components
  - 5.6 Apply security during the build process
- 
- **Domain 6: Secure Software Testing**
  - 6.1 Develop security testing strategy & plan
  - 6.2 Develop security test cases
  - 6.3 Verify and validate documentation (e.g., installation and setup instructions, error messages, user guides, release notes)
  - 6.4 Identify undocumented functionality
  - 6.5 Analyze security implications of test results (e.g., impact on product management, prioritization, break/build criteria)
  - 6.6 Classify and track security errors
  - 6.7 Secure test data
  - 6.8 Perform verification and validation testing (e.g., independent/internal verification and validation, acceptance test)
- 
- **Domain 7: Secure Software Deployment, Operations, Maintenance**
  - 7.1 Perform operational risk analysis
  - 7.2 Secure configuration and version control
  - 7.3 Release software securely

- ◊ 7.4 Store and manage security data
- ◊ 7.5 Ensure secure installation
- ◊ 7.6 Obtain security approval to operate (e.g., risk acceptance, sign-off at appropriate level)
- ◊ 7.7 Perform information security continuous monitoring
- ◊ 7.8 Execute the incident response plan
- ◊ 7.9 Perform patch management (e.g. secure release, testing)
- ◊ 7.10 Perform vulnerability management (e.g., tracking, triaging, Common Vulnerabilities and Exposures (CVE))
- ◊ 7.11 Incorporate runtime protection (e.g., Runtime Application Self Protection (RASP), web application firewall (WAF), Address Space Layout Randomization (ASLR), dynamic execution prevention)
- ◊ 7.12 Support continuity of operations
- ◊ 7.13 Integrate service level objectives and service-level agreements (SLA) (e.g., maintenance, performance, availability, qualified personnel)

- ◆ ◊
- ◆ **Domain 8: Secure Software Supply Chain**
  - ◊ 8.1 Implement software supply chain risk management (e.g., International Organization for Standardization (ISO), National Institute of Standards and Technology (NIST)
  - ◊ 8.2 Analyze security of third-party software
  - ◊ 8.3 Verify pedigree and provenance
  - ◊ 8.4 Ensure and verify supplier security requirements in the acquisition process
  - ◊ 8.5 Support contractual requirements (e.g., intellectual property ownership, code escrow, liability, warranty, End-User License Agreement (EULA), service-level agreements (SLA))
- ◆ ◊
